

M.A.N. Brace System

Modular – Adjustable – No Weld

The **M.A.N.** Brace System from Tap Gate™ is sturdy yet flexible and convenient, insuring your fencing project is built as easy as possible. The 4 to 6.5 ft horizontal adjustment allow the ability to avoid obstacles during construction. Each

component in the system is made from SCH 40 steel tubing and can be ordered in a variety of standard sizes. Powder coating provides protection from the elements, identifies your property, protects the steel and eliminates the need for painting and paint chemicals. The

M.A.N. Brace System options can include the Clamp-On **DeadM.A.N.** and / or the Rotating **DeadM.A.N.** Both provide additional support and easily attach to the **M.A.N.** H-Brace or other existing H-Brace.

Because of its modular compact design the H-Brace can be transported in several pieces to the location and assembled on site with **NO WELDING** required! Installation is easier with the M.A.N. H-Brace

Have extra material you want to use? No problem, we can use YOUR material when suitable. You also have the option

to put **YOUR** custom logo, name, or message on the H-Brace with durable ASTM approved adhesive material. Each **M.A.N.** Brace component also comes with 144in² of high-intensity reflective tape so your property is easily identified.
